## **ABSTRACT:**

Multicentric clinical study on 150 patients with various liver disorders like viral hepatitis, alcoholic liver diseases, drug induced toxicity was conducted to test the efficacy of the hepatoprotective drug – **Livosil-B**. Biochemical investigations like T.Bilirubin, liver enzymes – SGOT, SGPT were carried out in addition to the monitoring of symptoms like nausea, vomiting, epigastric pain and anorexia, weakness, itching & liver tenderness. The results showed a decrease in the levels of T.Bilirubin, SGOT and SGPT upto 59%, 25% and 53% respectively. The decrease in Total Bilirubin, SGPT & SGOT was statistically significant ( $p < 0.05$ ) at the end of the treatment. There was also significant improvement in nausea, vomiting, epigastric pain and anorexia, weakness, itching & liver tenderness.
